

Safeview Nucleic Acid Stain NBS

The Safe Alternative to Ethidium Bromide

Productos para Laboratorio

OFERTA VÁLIDA HASTA EL 31/12/2021

- * *Non-carcinogenic DNA/RNA Stain*
- * *Used in the Same Way as Ethidium Bromide*
- * *Compatible with Standard Molecular Biology Applications*

Safe to Use

SafeView is non-carcinogenic and causes significantly fewer mutations in the Ames test. SafeView also tests negative in both the mouse marrow chromophilous erythrocyte micronucleus test and mouse spermary spermatocyte chromosomal aberration test.

Sensitive & Convenient

SafeView emits green fluorescence when bound to dsDNA, ssDNA and RNA and has a fluorescence excitation maxima when bound to nucleic acid at approx.290-320nm, emitting at 490nm.

Safeview Plus

Nucleic Acid Stain (10.000 x)

SafeView Plus represents the newest generation of nucleic acid stains. It can be safely and widely used for the visualisation of double-stranded DNA, single-stranded DNA, and RNA in agarose gels. SafeView Plus was developed to replace toxic ethidium bromide (EB, a potent mutagen) and has higher sensitivity and enhanced performance than SafeView. SafeView Plus is used as a substitute for ethidium bromide for post electrophoresis DNA staining. There is no need to add it to the electrophoresis buffer or casting gel. The fluorescence has an excitation maxima at approximately 490nm.

SafeView is a safe nucleic acid stain for the detection of dsDNA, ssDNA and RNA in agarose gel. This dye replaces Ethidium Bromide (toxic, potential mutagen) commonly used in agarose gel electrophoresis.

Also Available

SafeWhite Nucleic Acid Stain
Stain incorporated into loading buffer

SafeWhite Utilises the same technology as SafeView but in the form of a convenient 6x ready-to-use loading buffer!
