

Glass Immersion Condenser, Rettberg

Immersion Condenser with glass cooling coil, for cooling and temperature control, for use with multi-neck flasks, reaction vessels, distilling apparatus or similar. The immersion depth from beneath the ground area is adjustable from approx 85 to 150 mm (e.g. suitable for multi-neck spherical flasks with angled side necks, capacity 250 ml to 2 liters). Supplied complete with ground cone NS 29, cap, seal and 9 mm plastic tube connectors (but not including the three-way stopcock shown in the illustration).
