

BOLA Multiple Distributors for Bottles, Bohlender

Multiple distributors for bottles, made of PTFE or PP, with GL threaded necks and screw cap, suitable for bottles with thread GL45. The multiple distributors are ideal for transferring liquids. The necks are connected either to a liquid source or to a pressure or vacuum system. For easy connection we recommend BOLA laboratory screw joints. These must be ordered separately according to your desired tube outside diameter. Temperature resistance: PP up to +110°C, PTFE up to +250°C.

① BOLA multiple distributors

Material	Necks	for tube O.D. up to mm	Order No.
PP	2×GL14	6	22 17 61208
PP	3×GL14	6	22 17 61308
PFA	2×GL14	6	22 17 61408
