

BIO-SILICO® culture stoppers, Hirschmann

HIRSCHMANN®

BIO-SILICO® are specially processed culture plugs in silicone rubber with continuous bubbles for preparation, filling and sterilisation of culture media. Their uniform pore structure and good air permeability make them excellent for the cultivation of aerobic micro-organisms.

BIO-SILICO® culture stoppers have high air permeability, similar to cotton plugs. The stoppers are water repellent, chemically resistant, temperature resistant and reusable.
